Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	Project mastery	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The user will input the time in minutes spent: Designing, coding, debugging, and testing separately. (Ex: Designing: 20 min, coding: 40 min, debugging: 10 min, testing: 5 min.)	The program will add the time taken in each aspect together for the total time, it will then in 4 separate calculations, divide the original numbers by this total number, multiply by 100 and then it will look like a percentage.	The final output will display the total time spent on the project, as well as the percentage of time each part of the project took in total.
